

Custom Digital Interior Signage Solutions for Environments

All ASI SlimLine digital interior signage is designed to meet the needs of each client. Our knowledgeable consultants meet with each client to discover and define how digital signage will work best for the facility. We evaluate the interior architectural design and floor plan to identify opportunities or challenges for digital installations. The result is a digital solution tailored to meet the individual needs of the client and architectural environment.

Digital Signage Platforms:

- **Wall mount** – Surface mounted either vertically or horizontally, can be colored to match surrounding decor
- **Free Standing** – Slender big screen solutions with a thin profile in a floor stand housing with a vertical screen format
- **Room Sign** – Elegant design with dynamic room booking software options
- **ID Screen** – Easily updatable, ideal for room, cubicle and desktop identification, powered by self-contained battery
- **Video Wall** – Displays content across multiple screens (vertical or horizontal) from a single player with resolutions much higher than full 1080 HD

Custom Enclosure Material and Finish Options:

- Enclosure material options: stainless steel, aluminum, glass, acrylic, wood-laminate paneling and more
- Finish options: 140 standard paint finishes, custom colors and powder-coating available
- Graphic options: Surface applied vinyl and digital graphics, print on panel full-color graphics available

Dynamic and Interactive Digital Capabilities
